

ActiveNav Inventory™

Understand the risk and value of your data with a single-pane-of-glass view into your diverse data repositories.

Quickly Discover and Map Data at Scale

Multiple, complex privacy laws and mandates continue to push organizations to protect sensitive, personal data. Identifying data that meets specific factors such as stale and sensitive helps organizations find and address risk areas within their data universe to fulfill compliance and legal requirements.

ActiveNav Inventory empowers organizations to use their information effectively and deliver business value by bringing together data from diverse sources with an always-on inventory and actionable insights. The software discovers, maps, and aggregates data in the cloud and provides compelling, highly usable visualization of that information. This allows data owners and information professionals to make defensible decisions for its disposal, protection, or re-use as a valuable business asset.

With **ActiveNav Inventory**, you can:

- Build a cross-repository inventory of all your unstructured content
- Visualize and explore content at scale
- Understand your risk profile with proprietary data scoring
- Leverage automation to maintain the stewardship of your data

**Cloud
deployment**

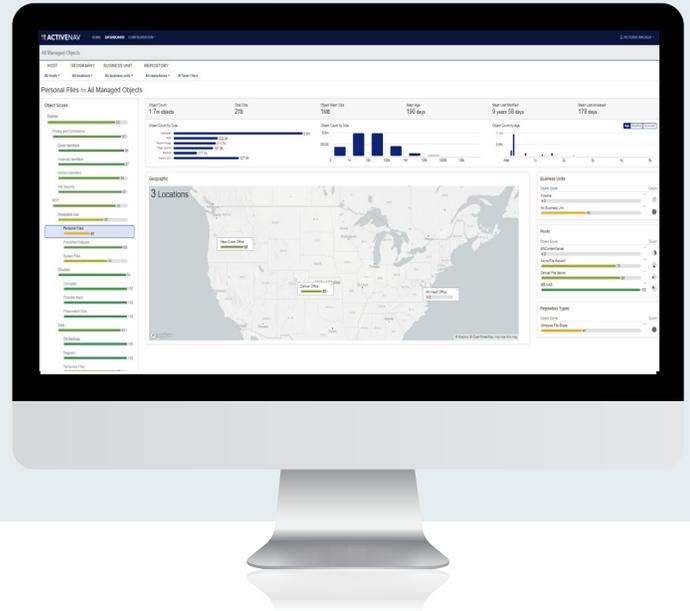

**Actionable
insights**

**Build a
trusted data
foundation**

Continuous Data Visibility

Whether used as part of a data mapping, minimization, migration, or storage optimization project, ActiveNav Inventory provides the insights you need to support all your data initiatives.

Build a data inventory in minutes

The software is easy to deploy, scales on-demand, and provides data scoring and insights within minutes. All interfaces and data are secured using Microsoft's industry-leading Azure cloud security.

Powerful customizable data scoring

Data is scored and mapped in context by business unit, geography, repository, or host, enabling rapid decision-making with actionable recommendations.

Low deployment footprint and network impact

The unique hybrid collector architecture has minimal impact on your network because all the heavy lifting is done in the cloud. Multi-tenant or dedicated instances are available.

Visualize content at scale for decision-making

Gain a single source of truth view of your unstructured data. The flexible deployment model and user interface remove the need for specialist expertise to deal with large data volumes effectively.

Isolate and visually depict areas of risk

Identify challenges and protect your customers by keeping their data safe. High performance, single-pane-of-glass, web-based dashboards make it easy to drill down to the most obscure data.

Drive business value from your dark data

Work with content across key facets, such as ownership and repository type, to understand and manage dark data. Robust reporting is tailored to specific business roles.
